The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytotoxic T lymphocyte (CTL) in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The

Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antigen-presenting cell contains an expression vector including the polymucleotides encoding the CD45 peptides. The activated CTLs are useful for killing, and in the manufacture of a medicament for target cells coxpressing the CD45 peptides in a pattent. A T cell receptor (TCR), recognising cells expressing the CD45 peptides, is useful for killing target cells (cancer cells) in a pattent which involves obtaining CTLs from the pattent, introducing into the CTLs the polymucleotide encoding the TCR and then introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Thunour reactive CTLs have been shown to mediate tumour regression in animals models by the inhibition of colony forming unit-granulocyte macrophage (CTU-GM) colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The method is useful as an immunotherapeutic for treating a patient with haematopoietic malignancy or to target and kill cells which captes the CD45 polypeptide. The advantage this method provides is that the CTLs destroy the malignant haematopoietic cells but not the comparising an HLA-binding nentide of human CD45.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC call, where its major histocompatibility complex (MHC) class I molecules care loaded with the peptide, to activate, in an antigen-presenting cc are loaded with the peptide, to activate, in an antigen specific manner, cc where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The cc antigen-presenting cell contains an expression vector including the CG for killing, and in the manufacture of a medicament for, target cells cexpressing the CD45 peptides. The activated CTLs are useful crecognising cells expressing the CD45 peptides, is useful for killing cc expressing the CD45 peptides, is useful for killing cc from the patient, introducing into the CTLs the polynucleotide encoding the TCR and then introducing into the CTLs the polynucleotide encoding cc from the patient, introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Tumour reactive cc CTLs have been shown to mediate tumour regression in animals models by the inhibition of colony forming unit-granulocyte macrophage (CTU-GM) colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The malignancy or to target and kill cells which express the CD45 polypeptide. The sequence presented is the peptide, huCD45/6, comprising an HLA-binding peptide of human CD45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

                                                                        New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral
                                                                                                                WPI; 2004-419628/39.
N-PSDB; ADP24554.
The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antirheumatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antialle
                                                Claim
                                                                                                                                                                                          01-NOV-2002; 2002US-0423394P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc sequences, corresponding to human secreted proteins. AAY6451 to AAY65438 crepresent the EST-related proteins corresponding to AAZ42255 to AAZ43052. The 5' ESTs can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRS) and cupstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, as well as stability of ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in diagnostic procedures to identify individuals, or in diagnostic procedures to identify individuals available to resulting from abnormal gene expression. The products may also be used in gene therapy protocols. The mucleic acids encoding signal peptides can be used for directing extracellular secretion of a polypeptide or the insertion of a colypeptide into a membrane, or importing a polypeptide into a cell. The proteins encoded by the EST sequences may be useful in treating a variety of human conditions. Secreted proteins have therapeutic value, and the confidence into a present invention of a present sequences used in the exemplification of the secreted proteins have therapeutic value, and the confidence into a present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAZ42265 to AAZ43075 represent novel 5' expressed sequence tag (EST)

CR sequences, corresponding to human secreted proteins. AAY64651 to AAX43052.

CR represent the EST-related proteins corresponding to AAX42265 to AAZ43052.

CR The 5' ESTs can be used for producing secreted human gene products. They

CR can be used to identify and isolate 5' untranslated regions (UTR8) and

CR upstream regulatory regions which control the location, development

CR tage, rate, and quantity of protein synthesis, as well as stability of

CR mRNA. The ESTs are also useful as probes for chromosome mapping, and to

CR obtain full length cDNA clones. The ESTs can also be used in forensic

CR procedures to identify individuals, or in diagnostic procedures to

CR concedures to identify individuals, or in diagnostic procedures to

CR concedures to identify individuals, or in greated in gene therapy protocols. The

CR concedures to acids encoding signal peptides can be used for directing

CR extracellular secretion of a polypeptide or the insertion of a

CR polypeptide into a membrane, or importing a polypeptide into a cell. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-APR-1998;

CC AAZ42265 to AAZ43075 represent novel 5' expressed sequence tag (EST)
CC sequences, corresponding to human secreted proteins. AAY64651 to AAY6348
CC represent the EST-related proteins corresponding to AAZ426548
CC The 5' ESTs can be used for proteins corresponding to AAZ4265 to AAZ43052.
CC The 5' ESTs can be used for producing secreted human gene products. They
CC can be used to identify and isolate 5' untranslated regions '(UTRs) and
CC upstream regulatory regions which control the location, development
CC stage, rate, and quantity of protein synthesis, as well as stability of
CC mRNA. The ESTs are also useful as probes for chromosome mapping, and to
CC obtain full length cDNA clones. The ESTs can also be used in forensic
CC procedures to identify individuals, or in diagnostic procedures to
CC identify individuals having genetic diseases resulting from abnormal gene
CC expression. The products may also be used in gene therapy protocols. The
CC nucleic acids encoding signal peptides can be used for directing
CC extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell. The
CC proteins encoded by the EST sequences may be useful in treating a variety
CC identification of new secreted proteins have therapeutic value, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                              The present invention provides the protein and coding sequences of novel proteins from a variety of organisms; including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-JAN-2000; 2000US-00491404

tragment of a kinase, phosphatase, protease, which comprises a cc transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a cc mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide, or the antibody that binds to this cc polypeptide, is useful for treating cancer. The polypeptide is also conseful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptide is also compounded that binds to a naturally processed CC polypucleotides are particularly useful for treating or preventing compounds. The polypeptide is also converted as a converted as a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's, Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                             Wang
                                                                                and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                            encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypedide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAM39262;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAM39262 standard;
                                                                                                                                      Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                  as central nervous

                                                                                                                                                                                                                      The invention describes a purified polypeptide, which comprises a C fragment of a kinase, phosphatase, protease, protease inhibitor, C transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide. Is useful for treating cancer. The polypeptide is also CC useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC polypucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, CC lymphoma or leukaemia. These are also useful for screening agents for CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (RPT) isolated from human tissue for translational CC profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at fraction in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 吊
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 12

                                                                                                                                                                                                                                                    The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor, transcription factor. polypeptide is useful as an immunogenic composition for eliciting in mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to polypeptide, is useful for treating concer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypuclectides are particularly useful for treating or preventing
                                                                         polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, marcoma, melanoma lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at the color of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28-MAR-2001;

                                                                                                            The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor. The transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypeptide are particularly useful for treating or preventing oplynucleotides are particularly useful for screening agents for lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at from wino int/nuh/mihitahed not sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                 The invention relates to a method for identifying a protein tyrosine CC phosphatase (PTP) that is reversibly oxidized in a cell by: (i) that is reversibly oxidized in a cell by: (i) sample, including a cell that contains at least one PTP, to CC conditions that cause reversible oxidation of PTP; (ii) isolating PTP (CC anaerobically, in presence of a sulfhydryl-reactive agent (II) that crive conditions that cause reversible oxidation of PTP; (ii) isolating PTP (CC anaerobically, in presence of a sulfhydryl-reactive agent (II) that crive expensibly modifies the thiol group of an invariant Cys in the active CC of fephosphorylation, caused by PTP, of a labelled substrate (III), where CC dephosphorylation indicates that an active PTP is present. No details CC of tests for these activities are given. The method is used to identify CC reversibly oxidized PTP, also to identify agents that: (a) reversibly CC modify such PTP; or (b) alter inducible signalling pathways in which PTP CC are involved. These agents are potentially useful, in human or veterinary CC medicine, for treating abnormal cell proliferation or growth (cancer); cquest vs. host disease; autoimmune diseases; allergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein tyrosine phosphatase; reversible oxidation; dephosphorylation;

                                                                                                                                                                                                                                                                                                                                             sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both stissue samples and comparing the expression of the soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has expressing the sample in the sample in the sample in the sample in the sample of protein expression in the first soft tissue sarcoma.
              Human polypeptide SEQ ID NO 5979
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                  Sequence 1143 AA;

                                                                                                                                   in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tang
Wang
                                                                                                              Sequence 1149
                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                     Novel nucleic acids and polypeptides, useful for treating as central nervous system injuries.
                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2001-442253/47.

                                                                                                                                                                                                                                                                                                         The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for aliciting in a colony peptide. The purified polypeptide, or the antibody that binds to this polypeptide. It is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and polypeptides and polypeptides and colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at

with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. invention have cytostatic, antiarteriosclerotic, anticonvulsant, nootropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic, antiinflammatory and thyromimetic activities, and can be used in gene therapy. The human KPP proteins and polynucleotides can be used in diagnosing, treating and preventing diseases or conditions associated The present sequence represents the human kinase and phosphatase protein (KPP), designated KPP-20. The human KPP sequences from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic slet, lung, bone marrow or stem cell transplant rejection, in a xenotransplant rejection or mechanical organ replacement rejection, in a individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein encoded by an mRNA sequence of the invention which show altered expression in real transplantation and expression or method approved the invention which show altered expression in real transplantation and expression or method approved the invention which show altered expression in real transplantation and expression.

                                                                                                                                                                                                                                                                                                                                                                                                    CC B contiguous mucleotides where one of the nucleotides is an SNP given in CC the specification or its complement and encoding any one of the amino CC acid sequences given in the specification; an isolated polypeptide CC comprising an amino acid sequence given in the specification; an antibody that specificatly binds to the polypeptide or its antigen-binding CC fragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the CC polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the CC polymucleotide; an agent useful in treating or preventing cC method for identifying an agent useful in treating or preventing cC The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or CC composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from CC associated gene containing one or more SNP's of the invention. Note: This capture is a sequence and shown in the specification. The sequence has come from CC an electronic sequence listing downloaded from the WIPO website.

The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least
                   Human expressed protein tag (EPT) #1909
                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 10;

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an account of the color of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Translational profiling; expressed protein tag; EPT; kina protease; protease inhibitor; transporter, cytoskeletal protease; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed of the province of the protein tag is the contract of the printed diseases. The profiling is provinced to the protein tag that the printed of the province of the printed diseases. The printed diseases of the printed diseases of the printed diseases of the printed diseases of the printed diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-MAR-2001; 2001US-0279495P.

The invention describes a purified polypeptide, which comprises a configuration of a kinase, photsphatase, protease, protease inhibitor, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and polypeptide is also polypeutides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-MAR-2001; 2001US-0279495P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that irreversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer);
                                                                                                                                                                                                                                                                                                                                                                                                                                                          guest vs. host disease; autoimmune diseases; allergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme

gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis in a mammal; an array or gene chip, specific for rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collageninduced arthritis; and reducing the symptoms associated with collageninduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic,
                                                                                                                                          antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, fibrositis, and an fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an immune disease caused by an infectious agent. This sequence represents a protein sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic format from

                                                                                                                                                                                   밁
                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method for identifying genes that are cover-expressed in adipose tissue and as such it provides targets for anti cobesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polypeptide sequence is a human homologue of a murine adipocyte specific protein sequence of the invention.
                                                                                                                                                                                                                                                              Query Match

cc recombinant nucleic acid or expression vector, a microarray for detecting cc cancer associated (CA) nucleic acid comprising at least one probe cc comprising at least 10 contiguous nucleotides of any of the above-mentioned nucleotide sequences, an isolated polypeptide (encoded within CC an open reading frame of a CA sequence selected from any of the 95 cc complement), an isolated antibody, (or its antigen binding fragment) that composition composition comprising the above cc monoclonal antibody, a pharmaceutical composition comprising the above cc antibody and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer cells (comprising the presence or absence of cancer cells in an individual, a method for delivering a therapeutic agent to cancer cc individual, a method for delivering a therapeutic agent to cancer cc individual, an electronic library comprising the above polypeptide (or their fragments), methods of screening cr associated with expression of a polypeptide in a test cell sample, a second for treating cancer and a method for inhibiting the expression of a golypeptide in a test cell sample, a cancer cancer activity or for a bioactive agent to cancer composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and clukaemia. These may also be used in screening for agents that modulate cancer data for this patent did not form part of the printed cancer the present sequence is a human CAP protein format directly from WIPO at the printed of a term will be above the above the sequence. Note: The specification, but was obtained in electronic format directly from WIPO at the published act agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14-FEB-2003; 2003US-00367094.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polymucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.

comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from
                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide

acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length, a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This

sequence represents the protein of a human myocardial infarction-associated gene containing one or more SNP's of the invention. No sequence was not shown in the specification. The sequence has com

Note:

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification of the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the amino the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification or its complement and encoding any one of the specification of t

Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.

Claim 2; Page 38; 56pp; English.

The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytocoxic T lymphocyte (CTL) in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The

```
CC polynuclectides encoding the CD45 peptides. The activated CTIs are useful CC for killing, and in the manufacture of a medicament for, target cells CC expressing the CD45 peptides in a patient. A T cell receptor (TCR), CC recognising cells expressing the CD45 peptides, is useful for killing CT target cells (cancer cells) in a patient which involves obtaining CTLs (C from the patient, introducing into the CTLs the polynucleotide encoding CC from the patient, introducing the cells thus produced into the patient who has undergone an aligenic stem cell transplantation. Tumour reactive CC the inhibition of colony formity unit-granulocyte macrophage (CFU-GM) CC colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The method is useful as an immunotherapeutic for treating a CC patient with haematopoietic malignancy or to target and kill cells which express the CD45 polypeptide. The sequence presented is the peptide, huCD45/6, CC comprising an Hia, binding peptide of human CD45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match; 100

A novel T lymphocyte veto molecule is a chimeric molecule comprising protein linked to a targetting polypeptide, e.g. the present sequence that binds a molecule, which differentiates a host cell from a tissue graft cell, or selectively targets a stimulator cell involved in the autoimmune response. A veto molecule, in which the protein binds a
                                                                                                                                                           Tlymphocyte veto molecule comprising response cell activating protein linked to molecule that targets stimulator cell marker, used for selective suppression of immune response, e.g. prevention of graft rejection or treatment of auto-immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          molecule that targets stimulator cells, can be used to suppress an immune response and therefore treat autoimmune diseases, e.g. systemic lupus erythematosus, myssthenia gravis, rheumatoid arthritis, insulin dependent diabetes mellitus, multiple sclerosis, coeliac disease, autoimmune thyroiditis, Addison's or Grave's diseases and rheumatoid carditis, allergies and other immunological disorders. Where the protein binds a molecule that differentiates graft and host cells, the veto molecule can be used to reduce transplant rejection. The veto molecule provides specific regulation of particular stimulator cells that can kill graft cells or respond to autoantigens, but leave other stimulator rells unaffected, e.g. CD4 or CD8 positive cells can be regulated without one affecting the other. The veto molecule can be administered locally to minimise generalised immunosuppression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRO; antiinflammatory; antiarthritic; antirheumatic; immunosuppressive; osteopathic; antidiabetic; dermatological; antipsoriatic; antiallergic; antiasthmatic; hepatotropic; respiratory; gene therapy; immune system.

polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antirheumatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, it agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as

The invention relates to a novel isolated nucleic acid and the

PRO

systemic lupus erythematosus, rheumatoid

osteoarthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease of the lung, eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonitis, a transplantation associated disease, graft rejection or the contract dermatities and the procession of the lung pneumonitis at transplantation associated disease.
                              AAZ42265 to AAZ43075 represent novel 5' expressed sequence tag (EST) sequences, corresponding to human secreted proteins. AAX64651 to AAX43052. represent the EST-related proteins corresponding to AAZ42265. to AAZ43052. The 5' ESTs can be used for producing secreted human gene products. They
